Submarkets

**69% of Irving Park is in Submarket 2.**
Higher density urban and suburban, large households, high foreclosure/moderate vacancy, low/moderate income

**31% of Irving Park is in Submarket 3.**
Higher density urban, high income, young, high home prices and rents

Areas with a similar combination of these submarkets:

| Albany Park | Brighton Park | Montclare |
| Archer Heights | Cicero | Portage Park |
| Armour Square | East Side | Rogers Park |
| Avondale | Gage Park | South Lawndale |
| Belmont Cragin | Hermosa | Stone Park |
| Berwyn | Highwood | Summit |
| Blue Island | Lower West Side | West Ridge |
| Bridgeport | McKinley Park |

## Issues + strategies

Most communities have multiple submarkets within their boundaries. The issues facing each submarket as well as strategies tailored to address them are outlined below.

<table>
<thead>
<tr>
<th>Issue</th>

</tr>
</tbody>
</table>
Submarkets with primary focus

| Issue | 2 | 3 |

Submarket 2

Finding a balance between too aggressive and too lenient code enforcement can be difficult. Development pressures in some parts of submarket 2 allow the market to either rehabilitate or replace older units with code issues. In other parts of submarket 2, where the market is comparatively weaker, communities struggle to find the right balance in addressing code issues. Too aggressive enforcement can lead to vacancy and reduced neighborhood stability because building owners cannot afford to make all the repairs. Too lenient enforcement can lead to households living in unsafe or unsanitary homes. Burdensome point of sale requirements may deter new investment in the community, and challenges with staff capacity can result in long waiting periods to complete required inspections. The results of either approach compound over time and can serve as a deterrent to future market-driven rehabilitation.

Strategies

Rental unit monitoring and regulation

Effective municipal regulation, coupled with pro-active strategies and incentives, can improve rental quality and reduce problems. With the number of rental properties in submarket 2, municipalities need to review the structure of their rental unit monitoring and regulation efforts to make sure that they are effectively maintaining the quality of the local rental stock in accordance with state law. Municipalities may want to consider implementing a performance-based rental regulation ordinance such as the one in place in the Village of Addison. Municipalities may also want to point owners of multifamily rental property to the abundance of resources at the Community Investment Corporation (CIC) for financing, energy efficiency, and property management training. Learn about best practice rental regulation strategies.

Strategic code enforcement on vacant properties

Code enforcement departments should create targeted intervention strategies based on certain property characteristics. Code enforcement departments should create targeted intervention strategies based on certain property characteristics. Municipalities must find the right balance in code-enforcement work. Too lenient enforcement can allow vacant and abandoned properties to blight a neighborhood. Too stringent enforcement can deter additional investment in a neighborhood. For example, some municipalities have reported that boarding vacant properties actually discourages neighborhood investment and the best strategy is to make a property appear occupied. Code enforcement departments should maintain vacant property to the best of their ability and issue priority property maintenance liens as necessary. Even sending a notice to a property owner that a priority lien will be issued may encourage an owner to pay past fines or start taking an interest in the property. However, it is important for code enforcement departments to also make a plan when it is clear that the owner of a property is no longer being responsive. Outlining a strategy to identify properties that may need more aggressive intervention is important. At a certain point when the owner is no longer responding it may be more cost efficient in the long run to intervene with a more aggressive strategy. Communities must be willing to utilize the full arsenal of enforcement tools, including demolition or declaration of abandonment, if necessary. Learn more about strategies to deal with vacant properties.
**Submarkets with primary focus**

<table>
<thead>
<tr>
<th>Issue</th>
<th>2</th>
<th>3</th>
</tr>
</thead>
</table>

**Utilize demolition, fast-track, and abandonment authority**

More aggressive strategies may be needed when owners become unresponsive. When it is clear an owner of a vacant property is no longer being responsive, municipalities should consider more aggressive strategies. The Metropolitan Mayors Caucus and BPI’s publication on Vacant Building Ordinances provides detailed information and step-by-step guidance on abandonment, fast track demolition, and declaration of abandonment. Some south suburban municipalities have used their abandonment authority to take control of problem properties and then partner with the South Suburban Land Bank to transfer ownership of these properties to responsible owners. The Village of Lansing has been using abandonment petitions to gain control of vacant properties, reduce strain on municipal resources, and attract investment. **Learn more about strategies to deal with vacant properties.**

<table>
<thead>
<tr>
<th>Community resistance</th>
</tr>
</thead>
</table>

**Submarket 3**

Community resistance can stymy new housing options. Despite the higher incomes for some submarket 3 households, developers do not report frequent community resistance issues relative to other submarkets. Some believe this is because of the greater mix of ages and incomes present in submarket 3. Others feel this is because many submarket 3 communities have a natural constituency of non-profits, community organizations, and residents who will support new development, including for low- and moderate-income households. A few mentioned the value of strong political leadership in setting the tone for a desire for balanced housing types and acceptance of people from across the income spectrum. That said, resistance in submarket 3 is less than in other areas, but not absent. Some projects do run into resistance due to concerns about parking, traffic, density, height, and income of occupants.

**Strategies**

**Community education**

Targeted efforts to build support for diversity of housing stock and people can help address community resistance. **Targeted efforts to build support for diversity of housing stock and people can help address community resistance.** Many groups, including elected officials, government staff, non-profits, and citizens, have explored ways to build community support for new housing types and greater local diversity. Utilizing these models in submarket 3 can help address community resistance issues. **Read more about the many different best practices.**

**Value of housing planning**

Using tools like Homes for a Changing Region can be valuable. **Using tools like Homes for a Changing Region can be valuable.** In the midst of a strong market, it can be hard to find space to step back and think about over-arching issues. Yet, communities that undertake local housing planning, such as that done through Homes for a Changing Region, benefit from a clear vision of the types of housing needed by the community and can be less reactive to new proposals.
<table>
<thead>
<tr>
<th>Submarkets with primary focus</th>

</thead>
<tbody>
<tr>
<td>Issue</td>
</tr>
<tr>
<td>2</td>
</tr>
<tr>
<td>3</td>
</tr>
<tr>
<td>Foreclosure</td>
</tr>
</tbody>
</table>

Submarket 2

Communities struggle to determine how best to deal with foreclosures. Stakeholders raised concerns about the ongoing impact of foreclosures in submarket 2. The lingering effects depend on the proximity to other markets. Near stronger submarkets, like 3 and 7, foreclosures can be addressed more easily, with units often reoccupied, whether by owners or renters. In other areas, communities struggle to determine how best to deal with foreclosures. If not properly addressed, foreclosures can begin a neighborhood cycle of disinvestment. Prolonged disinvestment drives property abandonment, resulting in demolition in many cases. While demolition may represent an immediate benefit to surrounding residents, high rates of demolition can also create new challenges by disrupting the fabric of the built environment.

Strategies

**High priority property maintenance liens**

Municipalities should utilize priority liens to recover costs incurred for securing and maintaining abandoned residential property.

Illinois law allows for priority liens for securing and maintaining abandoned residential property. The law applies to any type of permanent dwelling unit that has been unoccupied for at least 90 days and for which the municipality attempted to contact the owner(s) or the owner's agent(s) but was unable to reach anyone. It covers the removal of weeds, trees, bushes, grass, garbage, debris, or graffiti, and securing or enclosing the property. Liens obtained under this law are superior to all other liens, except taxes. Under this law, municipalities recover their expenses after taxes are paid but before the mortgage is recovered. Thus, municipalities will recover even when the value of the property is less than the value of the mortgage. If municipalities are maintaining vacant property in their community, they should be sure to go through the necessary steps to file a high priority lien on the property. The Metropolitan Mayors Caucus and Business and Professional People for the Public Interest’s (BPI) publication on [Vacant Building Ordinances](#) provides detailed information and step-by-step guidance on this process. Learn more about strategies to deal with vacant property.

**Housing counseling**

Communities should familiarize themselves with any HUD certified housing counseling agencies in their area and market their services to residents.

**Land banking**
Land banks can be used as a strategic tool to acquire problem vacant properties and convert them into assets. Land banks are governmental entities or nonprofit corporations that focus on the conversion of vacant, abandoned and tax delinquent properties into productive use and have proved to be a useful tool to help reinvent and revitalize neighborhoods. Most vacant and abandoned properties have many legal and financial barriers, such as years of back taxes and clouded title that make it difficult to attract investors. Land banks have the ability to hold land tax-free and clear title and/or extinguish back taxes, which can be essential when trying to attract buyers and investment. Land banks can work in partnership with municipalities to advance community-based goals. There are two successful examples of land banks in Illinois, in both the south suburbs and Cook County, and other areas of the region struggling with issues of vacancy and blight might consider the use of land banking as a tool in their community. The Center for Community Progress is a good starting point to learning about land banking. Learn more about strategies to deal with vacant property.

Resource targeting
Targeting resources can increase their impact. Submarket 2 neighborhoods often attract funding to address local issues because of evidence of distress, like more foreclosures and high levels of cost burden. To ensure those resources maximize impact, communities, program operators, and funders should explore how to work closely in targeting those resources, as was done by Evanston with its Neighborhood Stabilization Program or Chicago with its Micro-Market Recovery Program.

Review regulations affecting real estate development
Communities may want to review Point of Sale requirements in order to determine if they are discouraging investment in the municipality. Communities may want to review Point of Sale requirements in order to determine if they are discouraging investment in the municipality. Burdensome Point of Sale requirements—the steps that a seller or purchaser must go through with a municipality to buy a sell or unit—can dampen market interest in a community. An internal audit of Point of Sale requirements that considers the time to complete the entire process may prove helpful. Communities may consider conducting a focus group of potential developers/investors to gather feedback on the requirements and how they can be improved. Municipalities want to be sure their process is efficient, and at times flexible, in order to encourage sales activity in the community.

### Potential for rapid neighborhood change

<table>
<thead>
<tr>
<th>Submarket 2</th>
</tr>
</thead>
</table>

**Proximity of submarket 2 to submarkets 3 and 7 increase the potential for rapid change.** Submarket 2 often abuts higher income or rapidly developing areas (i.e. submarkets 3 or 7). Market specialists think that the pressure on submarket 2 to change will not abate since these areas are often close-in with good job and transit access and a form attractive to many households.

### Strategies

**Adaptive reuse**

Reusing existing buildings can help lower development costs and create affordable options. Reusing existing buildings can help lower development costs and create affordable options. The age of the buildings in submarket 2, including the presence of large older industrial or commercial buildings, lends itself adaptive reuse, such as the Karcher Artspace Lofts in Waukegan.

**Affordability through reduced parking**

Reducing parking requirements can help to keep housing costs attainable. Reducing parking requirements can help to keep housing costs attainable. Providing parking costs money. Higher sales prices or rents must support those costs. The more parking required by the municipality, the more expensive the development. For communities looking to preserve affordability or help create new housing at more affordable prices, reducing or eliminating parking requirements can help. In Chicago, the Transit-Oriented Development Ordinance (TOD) reduces or eliminates parking requirements near transit while density bonuses for developers who take advantage of the provisions.
<table>

</thead>
<tbody>
<tr>
<td><strong>Issue</strong></td>
</tr>
</tbody>
</table>

Many believe that this requirement has helped amplify the rental development boom in strong markets like Logan Square and the West Loop, opening up previously undevelopable parcels for action. In Libertyville, developers can cash out their parking requirements, paying the village a fee in lieu of parking not provided on-site.

**Community leadership**

Strong local community groups can help involve existing residents in guiding the future of their neighborhood.

**Inclusionary zoning**

Communities can use strong markets to create affordable housing.

**Affordable requirements ordinance (ARO):** Chicago adopted a new inclusionary housing ordinance in 2015. A number of stakeholders identified potential positives and negatives in the ARO. Yet, because the ordinance is so new, it remains to be seen how market rate developers will comply. Monitoring its implementation will help other communities understand whether it will serve as a model.

**Land trusts**

Land trusts can provide affordable housing in perpetuity by owning land and leasing it to those who live in houses built on that land.

**Preservation and expansion of affordable housing**

Preserving affordable housing options can help existing residents stay in changing neighborhoods.

Preserving affordable housing options can help existing residents stay in changing neighborhoods. Ensuring existing residents have an opportunity to remain even as a neighborhood changes requires dedicated programs to preserve low cost units. For example, Chicago passed the Single-room Occupancy Preservation Ordinance in 2014, highlighting the value of municipal intervention to preserve a targeted unit type. Similarly, the work in Albany Park highlights the value of targeted work by local non-profits to preserve units in areas on the cusp of rapid change.

**Submarket 2**

*How much a community focuses on housing issues in submarket 2 depends on context.* Some communities focus on the housing issues in submarket 2 more than others. The emphasis likely depends on the mix of submarkets in a local community along with capacity. Municipalities with more vibrant housing markets or more distressed areas may not choose to focus on housing issues in this submarket, viewing it as stable.

**Strategies**

**Resource targeting**

Targeting resources can increase their impact.

<table>
<thead>
<tr>
<th>Rehabilitation challenges</th>
<th></th>
</tr>
</thead>
</table>

**Submarket 2**

*Rehab programs may be underutilized.* In response to deferred maintenance and code issues, many organizations operate housing rehabilitation programs. Yet, these programs are not always heavily used. The cost of bringing a unit up to code may exceed available funding, limiting the utility of the program to local residents. On the other hand, in some areas of Submarket 2, market pressures may make rehab more financially feasible.
### Submarkets with primary focus

<table>
<thead>
<tr>
<th>Issue</th>
<th>2</th>
<th>3</th>
</tr>
</thead>
</table>

#### Strategies

**Approach to rehabilitation**

Municipal rehab programs can help certain residents address issues of deferred property maintenance.

Municipalities, counties, and non-profits have developed many different models for how to operate local rehabilitation programs. The key to success is choosing a structure that matches the size and scope of the code issues in the targeted community and matches the financial condition of building owners. [Read more](#) about the many different models of rehabilitation programs in the region.

#### Tenure changes

Units may be changing from owner-occupied to renter-occupied. In some ways, the change in tenure is beneficial: the market is finding ways to ensure that foreclosed units do not remain vacant. Yet, the change in tenure can have many impacts. More rental units may challenge the ability of communities to effectively monitor and manage the local rental stock due to the rapid increase in the number of rental units. Such changes may also signal financing challenges, leaving potential owners as renters.

#### Submarket 2

Units may be changing from owner-occupied to renter-occupied. In some ways, the change in tenure is beneficial: the market is finding ways to ensure that foreclosed units do not remain vacant. Yet, the change in tenure can have many impacts. More rental units may challenge the ability of communities to effectively monitor and manage the local rental stock due to the rapid increase in the number of rental units. Such changes may also signal financing challenges, leaving potential owners as renters.

#### Strategies

**Rental unit monitoring and regulation**

Effective municipal regulation, coupled with pro-active strategies and incentives, can improve rental quality and reduce problems.

Effective municipal regulation, coupled with pro-active strategies and incentives, can improve rental quality and reduce problems. With the number of rental properties in submarket 2, municipalities need to review the structure of their rental unit monitoring and regulation efforts to make sure that they are effectively maintaining the quality of the local rental stock in accordance with state law. Municipalities may want to consider implementing a performance-based rental regulation ordinance such as the one in place in the Village of Addison. Municipalities may also want to point owners of multifamily rental property to the abundance of resources at the Community Investment Corporation (CIC) for financing, energy efficiency, and property management training. [Learn about best practice rental regulation strategies](#).

#### Very strong market

Submarket 3 neighborhoods are among the strongest housing markets in the region. Such strength allows the market to address housing issues that many other areas struggle with, including an older housing stock. Yet, that strong demand makes it challenging to preserve housing opportunities for current residents. Price and rent increases can drive out existing residents. Demand for smaller rental units is strong enough relative to sales prices that
developers are de-converting condominiums into apartments. Demand for single-family homes is so much stronger than rentals that developers tear down multiple rental units to build a smaller number of single-family homes. Market specialists think that demand will not abate in the near future since these areas are often close-in with good job and transit access and a form attractive to many households.

**Strategies**

**Affordability through reduced parking**

Reducing parking requirements can help to keep housing costs attainable. For communities looking to preserve affordability or help create new housing at more affordable prices, reducing or eliminating parking requirements can help. Higher sales prices or rents must support every additional parking space required by a municipality. The more parking required, the more expensive the development. In Chicago, the Transit-Oriented Development Ordinance (TOD) reduces or eliminates parking requirements near transit while density bonuses for developers who take advantage of the provisions. Many believe that this requirement has helped amplify the rental development boom in strong markets like Logan Square and the West Loop, opening up previously undevelopable parcels for action. In Libertyville, developers can cash-out their parking requirements, paying the village a fee in lieu of parking not provided on-site.

**Inclusionary zoning**

Communities can use strong markets to create affordable housing. Inclusionary zoning efforts naturally work well in strong markets, leveraging the construction of new market rate units to add affordable units. Many communities in the region have adopted inclusionary zoning ordinances, including Chicago (ARO), Evanston, Highland Park, and Lake Forest.

**Affordable requirements ordinance (ARO):** Chicago adopted a new inclusionary housing ordinance in 2015. A number of stakeholders identified potential positives and negatives in the ARO. Yet, because the ordinance is so new, it remains to be seen how market rate developers will comply. Monitoring its implementation will help other communities understand whether it will serve as a model.

**Land trusts**

Land trusts can provide affordable housing in perpetuity by owning land and leasing it to those who live in houses built on that land. Land trusts, like those operating in Chicago and the North Shore, are often an effective tool in helping preserve currently affordable units due to a land trust’s unique ownership structure. When a land trust sells a unit to an owner, they only sell the improvements (i.e. the home), but not the land underneath. As a result, a household can purchase a home for substantially less than what it would ordinarily cost.

**Preservation and expansion of affordable housing**

Preserving affordable housing options can help existing residents stay in changing neighborhoods.
Preserving affordable housing options can help existing residents stay in changing neighborhoods. Dedicated programs designed to preserve lower cost units can help ensure that even as a neighborhood changes, existing residents have an opportunity to remain. For example, Chicago passed the Single-room Occupancy Preservation Ordinance in 2014, which helps non-profits compete with private firms to preserve a targeted unit type. Similarly, the work in Albany Park highlights the value of targeted work by local non-profits to preserve units in areas on the cusp of rapid change.
