Issues + strategies

Most communities have multiple submarkets within their boundaries. The issues facing each submarket as well as strategies tailored to address them are outlined below.

	Submarkets with primary focus	
Issue	6	8
Accessibility and visitability		•

Submarket 8

Improving accessibility and visitability can prepare communities for a growing senior population. A growing senior population raises concerns about whether submarket 8 communities are prepared as accessible and visitable places to live. As new housing is built or current housing is rehabilitated, attention should be given to make sure that housing will address the present and future needs of this population. Some submarket 8 neighborhoods were built without important pedestrian infrastructure, like sidewalks and crosswalks. Figuring out how to retrofit such infrastructure into existing neighborhoods would also improve accessibility, as well as position communities to remain attractive as market preferences change.

Strategies

Age-friendly neighborhoods

Communities should create local amenities that will appeal to people of all ages, from young families to seniors.

<u>Communities should create local amenities that will appeal to people of all ages, from young families to</u> <u>seniors</u>. A community can best meet its social and economic demands by having a healthy balance of people from all age groups. Nevertheless, municipalities need to plan for amenities that can attract and retain residents. Neighborhood parks, public spaces and community art spaces such as Karcher Artspace Lofts in Waukegan and those created by Batavia, are only a few of the central elements of an age-friendly community. For seniors that want to live independently in the community, having access to services is vital. Municipalities should think about the development of senior housing/services complexes strategically, and ideally should locate them near transit stations and commercial areas. Such developments can be helped by specific transit oriented development ordinances like Chicago's, which allow increased residential density and reduced parking requirements. Sunset Woods in Highland Park and Thomas Place in Glenview are great examples of developments that came to fruition because of strong collaboration between developers and municipalities. The Northwest Suburban Housing Collaborative's Handyman Program is an innovative senior service program that connects seniors to low-cost maintenance services and helps them to live independently in their homes. Read more about age-friendly policies.

Value of housing planning

Municipalities should invest in long-term planning to identify policies and tools that prepare its housing stock for the future.

<u>Municipalities should invest in long-term planning to identify policies and tools that prepare its housing</u> <u>stock for the future.</u> Via planning tools like the Homes for a Changing Region Toolkit, municipalities can better understand current and future housing needs in their communities and develop strategies to

Attracting younger families

Submarket 8

<u>Communities have an opportunity to attract younger families by striking the right balance between</u> <u>affordable homes and amenities.</u> Younger families generally need affordable starter home price points in order to become new homebuyers. Additionally, providing amenities such as walkable neighborhoods, parks, and open spaces can help meet the preferences of younger generations, such as increased interest in biking and walking and more compact home environments.

Strategies

Age-friendly neighborhoods

Communities should create local amenities that will appeal to people of all ages, from young families to seniors

<u>Communities should create local amenities that will appeal to people of all ages, from young families to</u> <u>seniors.</u> A community can best meet its social and economic demands by having a healthy balance of people from all age groups. Nevertheless, municipalities need to plan for amenities that can attract and retain residents. Neighborhood parks, public spaces and community art spaces such as Karcher Artspace Lofts in Waukegan and those created by Batavia, are only a few of the central elements of an age-friendly community. Learn more about age-friendly neighborhood strategies.

Placemaking and marketing strategies

Communities should develop strategies to create greater neighborhood identity in order to encourage additional private sector investment.

<u>Communities should develop strategies to create greater neighborhood identity in order to encourage</u> <u>additional private sector investment.</u> Municipalities can make a concerted effort to enhance neighborhood character in Submarket 8 through strategic public investments such as neighborhood branding/signage, streetlights, sidewalks, etc. As noted before, adding pedestrian infrastructure to these existing neighborhoods will be particularly valuable. Public sector investment will likely signal to the private market a commitment to an area and make it more attractive for additional resources. Learn more about placemaking strategies.

Repurpose and redevelop property

Communities should evaluate existing zoning and take stock of existing infrastructure when making decisions about redevelopment.

Communities should evaluate existing zoning and take	stock of existing infrastruc	ture when making
decisions about redevelopment. Overdeveloped and va	cant retail areas can be re	zoned for mixed-use
developments or housing. When adding multi-family	units near transit, munici	palities should consider
lower parking requirements to relieve congestion an	d encourage walkability. N	lundelein's Downtown
Design Guidelines, Glenview's Downtown Developme	ent Code, and Libertyville's	payment in lieu of
required parking policy are all great examples of how	v to create a more efficient	built environment.

Community resistance	⊘	
----------------------	---	--

Submarket 6

<u>Community resistance to change often stymies new housing options.</u> Local opposition to new housing options beyond the traditional large single-family home is strong. Submarket 6 communities and can make it difficult to attract a diversity of housing options to the area. A few mentioned the value of strong political leadership in setting the tone for a desire of balanced housing types and acceptance of people from across the income spectrum.

Strategies

Community education

Targeted efforts to build support for diversity of housing stock and people can help address community resistance. <u>Targeted efforts to build support for diversity of housing stock and people can help address community</u> <u>resistance</u>. Many groups, including elected officials, government staff, non-profits, and citizens, have explored ways to build community support for new housing types and greater local diversity. Utilizing these models in submarket 6 can help address community resistance issues. Read more about the many different best practices.

Encourage partnerships with place-based CDCs

Developers that propose more dense housing options or affordable housing may be more likely to receive support if they can partner with a nonprofit community development corporation (CDC).

Developers that propose more dense housing options or affordable housing may be more likely to receive support if they can partner with a nonprofit community development corporation (CDC). CDCs are more likely to have a long-standing and trusted relationship with the local municipality. Elected officials and CDCs should consider meeting on a regular basis to discuss how they can work collaboratively to address local housing challenges and further develop a strong relationship and level of trust. Some areas of the region may lack a strong CDC network. Municipalities in these areas may want to evaluate if they should encourage the development of a local nonprofit partner that can help meet local housing goals. When new proposals are developed, it will be helpful to reference the messaging guide developed through the Housing Illinois campaign. Learn more about community acceptance strategies.

Establish a housing commission

Having a local body dedicated to housing issues helps a community craft policies that specifically respond to area housing needs.

strategies.	-	Ũ

Age-friendly neighborhoods

Age-friendly neighborhoods are walkable, offer housing and transportation choices, as well as access to basic needs and amenities.

<u>Age-friendly neighborhoods are walkable, offer housing and transportation choices, as well as access to</u> <u>basic needs and amenities.</u> CMAP's Aging in Place whitepaper has a variety of helpful strategies and notes that municipalities should focus on creating age-friendly land use and zoning policies that promote mixed use and allow a diversity of residential districts and housing types, such as allowing for multigenerational homes, cohousing, shared housing, and senior congregate housing. Communities should also accommodate diverse living arrangements, including: "Families of choice" (groups of individuals who are not biologically related but live together and share a kitchen) and allow child and elder care in residential settings by allowing older adults and caregivers to reside together. The Illinois Association of Realtors also has a useful webpage with additional Senior Housing Resources for local municipalities. Learn more about age-friendly community strategies.

Home modifications and maintenance

Implementing programs to help seniors with minor home repairs and safety modifications can help residents that want to age in place.

Implementing programs to help seniors with minor home repairs and safety modifications can help residents that want to age in place. Home modifications and maintenance are fundamental to keeping seniors safe in their homes. They can also be an effective way of reducing housing costs, and increasing affordability. There are a variety of assistance programs that a community can implement, which are outlined in Partners for Livable Communities' A *Blueprint for Action*. Many communities in our region such as those in the Northwest suburbs operate handyman programs to help seniors with small home repairs. Learn more about senior housing strategies.

Submarket 6

Attracting new population segments and serving the needs of existing residents may prove challenging given the limited housing stock diversity in the submarket. High housing values and incomes in Submarket 6 have resulted in stability in the housing market. However, municipalities in this Submarket may need to consider how to accommodate changing demand for housing options when trying to attract new segments of the population including young families and millennials, seniors who want to stay in the community, and local employers who want their employees to live near work. Municipalities will need to consider how to accommodate demand for a variety of housing options

	Submarkets wit	th primary focus
Issue	6	8

from these population groups, including smaller single-family homes, more compact development and multifamily housing. Interviewees also expressed concerns about Submarket 6 communities' ability to accommodate the needs of segments of the local workforce that may be housing cost burdened. Local opposition to new housing options, as well as more attainable housing from a cost perspective, is often strong and will present challenges to municipal officials. In addition, competition for, and cost of, land often make development of new housing options all the more challenging in Submarket 6.

Strategies

Affordability through reduced parking

Reducing parking requirements can help to keep housing costs attainable.

<u>Reducing parking requirements can help to keep housing costs attainable.</u> In residential developments, higher sales prices or rents must support every additional parking space required by a municipality. The more parking required, the more expensive the development. If communities in submarket 6 are considering building new multifamily housing at affordable prices, reducing or eliminating parking requirements can help. In Chicago, the Transit-Oriented Development Ordinance (TOD) reduces or eliminates parking requirements near transit while providing density bonuses for developers who take advantage of the provisions. Many believe that this has helped amplify the rental development boom in strong markets like Logan Square and the West Loop, opening up previously undevelopable parcels for action. In Libertyville, developers can cash-out their parking requirements, paying the village a fee in lieu of parking not provided on-site.

Affordable housing trust fund

An affordable housing trust fund can help to increase the production or preservation of affordable units within a community.

An affordable housing trust fund can help to increase the production or preservation of affordable units within a community. Municipal governments can establish dedicated sources of funding for affordable housing construction, acquisition and/or preservation, such as the fund created in Highland Park.

Demolition tax

Revenue raised from a demolition tax can be used to create a fund for the creation, preservation, maintenance and improvement of affordable housing within a municipality.

<u>Revenue raised from a demolition tax can be used to create a fund for the creation, preservation,</u> <u>maintenance and improvement of affordable housing within a municipality.</u> In strong market areas experiencing a loss of affordability or starter homes, a demolition tax can help to create a dedicated source of revenue to fund affordable housing initiatives within a municipality. Evanston, Highland Park, and Lake Forest all have implemented a demolition tax policy.

Establish a housing commission

Having a local body dedicated to housing issues helps a community craft policies that specifically respond to area housing needs.

<u>Having a local body dedicated to housing issues helps a community craft policies that specifically respond to</u> <u>area housing needs.</u> The Housing Commission can spend time better understanding the community's housing challenges and vetting potential solutions before they are brought to a Village Board. Both Highland Park and Lake Forest are examples of communities that have utilized housing commissions.

	Submarkets with primary focus	
Issue	6	8

Inclusionary zoning

Linking the production of market-rate housing and affordable housing can help address the issue of housing cost burden. Linking the production of market-rate housing and affordable housing can help address the issue of housing cost burden. Inclusionary zoning efforts naturally work well in strong markets. These policies either require or encourage new residential developments to make a certain percentage of the housing units affordable to residents at target income ranges. Many communities in the region have adopted inclusionary zoning ordinances, including Evanston, Highland Park, and Lake Forest.

Land trusts

Land trusts can provide affordable housing in perpetuity by owning land and leasing it to those who live in houses built on that land.

Land trusts can provide affordable housing in perpetuity by owning land and leasing it to those who live in <u>houses built on that land</u>. Land trusts, like those operating in <u>Chicago</u> and the <u>North Shore</u>, are often an effective tool in helping preserve currently affordable units due to a land trust's unique ownership structure. When a land trust sells a unit to an owner, they only sell the improvements (i.e. the home), but not the land underneath.

Preservation and expansion of affordable housing

Preserving housing units that are already affordable is especially important in strong markets.

<u>Preserving housing units that are already affordable is especially important in strong markets</u>. Any existing affordable housing already in Submarket 6 should be prioritized for preservation. Submarket 6 communities should explore strategies to ensure existing units remain in the long-term, in order to preserve residents' access to opportunities such as good schools and jobs. Land trusts have proven to be a useful preservation strategy. Similarly, the work in Albany Park highlights the value of targeted work by local non-profits to preserve units in areas with rising prices.

Value of housing planning

Housing planning can be used as a tool to address or prevent a serious mismatch between housing supply and demand for people at every stage of the life cycle.

Housing planning can be used as a tool to address or prevent a serious mismatch between housing supply and demand for people at every stage of the life cycle. In the midst of a strong market, it can be hard to find space to step back and think about overarching issues. Yet, communities that undertake local housing planning, such as that done through Homes for a Changing Region, benefit from a clear vision of the types of housing needed by the community, and can be less reactive to new proposals.

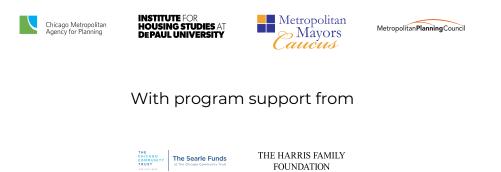

Submarket 8

The housing stock of communities should accommodate households of various sizes and income levels. Housing stock that is uniform in both its size and type can result in missed opportunities for communities to attract new residents and jobs. While most of the submarket's housing stock consists of newer single-family homes, communities have an opportunity to increase the diversification of their housing stock through new development or retrofitting existing stock. An increase in the mix of housing types can appeal to a wider buyer pool and allow submarket 8 communities to remain competitive as market conditions change.

Strategies			
Value of housing planning			
	m planning to identify policies and tools tha	t prepare its housing stock for	

Municipalities should invest in long-term planning to identify policies and tools that prepare its housing stock for the future. Via planning tools like the Homes for a Changing Region Toolkit, municipalities can better understand current and future housing needs in their communities and develop strategies to move toward a more "balanced" housing stock. Around the region, communities have been drawing on the principles of accessibility and sustainability to create healthier and safer housing. Plainfield's experience in housing development is instructive as well as its density bonus program, which provides an increase in residential density above a base level if a given development meets one or more of 15 village objectives. Community "buy in" regarding balanced housing is more likely to occur if a community creates a housing committee similar to those created by Highland Park and Lake Forest. Municipalities that are interested in incorporating greater accessibility/visitability standards into new development or rehab of existing single-family homes should review Bolingbrook's accessibility/visitability requirements.
